

## Hi clearance front fenders + rear box skin install

start the install by removing pieces , tail lamps , moldings fuel filler ect

front fenders are next , and simply removed by removing all the bolts

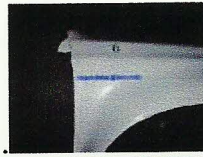

. Fitting the fiberglass front is next , The door gap needs to be finished , so

with a compass , scribe/draw a line

and trim .

setting the

fender back in place you can now mark and drill the mount holes

constantly checking the hood line .Mark the antenna hole and then fit the antenna

Marker lamps are next

and that wraps the front install .

rears will take a little more time . We use a Spot weld bit

to remove the
